FlexClock™
Multi-Purpose Time Device

FlexClock Z-Series—Exceptional Value

FlexClock is a feature-rich timekeeping solution that offers employers a wide variety of valuable labor management technologies through a series of practical timekeeping devices.

With the FlexClock Z23/Z24, organizations benefit from a time clock that utilizes a built-in biometric fingerprint reader and near real-time connectivity to the Web, all through an affordable device. The FlexClock Z-Series is an ideal fit for tracking your employee's punches.

Product Overview

Punch Data Collection

Collecting employee punches with the Z23/Z24 is highly secure and reliable as employees are each identified biometrically through a fingerprint scan, thus eliminating the costly expense of "buddy punching."

Employees may also utilize a PIN to log in, which would typically serve for "verification" between the employee's PIN and enrolled print.

Because of its affordability, the Z23/Z24 is a cost-effective solution for your timekeeping needs.

Features

The Z23 & Z24 offer simplicity and a practical solution for a number of challenges.

With near real-time biometric employee tracking that can be easily wall-mounted in your work environment, this device(s) is well suited for convenient but effective time tracking.

Near real-time data transmission also makes Z23 & Z24 a perfect fit for online "scheduling" features, which enable employers to more precisely track their employees.

Connectivity

The Z23 & Z24 connect to the Web to send employee data for online editing exclusively through an Ethernet connection, also commonly referred to as "digital," Internet-based, or IP based.

Punches are sent continuously throughout the day as employees clock in/out allowing employers to view punches online in near real-time.

Z-24 Wall Mount
For a squared unit and a more secure wall mount fixture, select the Z24.

Features Specifics

Z23 vs. Z24

The Z23 and Z24 timekeeping devices are virtually identical products; however, two distinguishing features exist between these options: the cosmetic "look" of the units ("rounded" vs. "squared") and the wall-mount option (additional screws provided with the Z24).

Wall Mount and Cosmetics

The Z23 offers a rounded time clock unit that mounts via traditional mounting screws. The Z24, however, provides a squared time clock unit that offers an additional set of screws for a more secure wall mount fixture.

"Best Fit for the Z23/Z24" - Practical Application

The Z23 and Z24 solutions are ideal for employers desiring the combination of biometric employee identification and near real-time (Ethernet) data transfer to the Web, allowing employers to view time card data, or employee punches, immediately over the Web for supervisory purposes.

The implementation of the Z23/Z24 with biometrics is frequently the solution for companies who face the severe cost associated with employee "buddy punching," or employee time theft, as it is a proven tool to ensure employees are truly on time and on site. And because this device offers near real-time connectivity, supervisors are able to log in online at any point in the day to verify employees are clocked in and at the proper location.

Further, with the fingerprint reader built right into the unit, it's considered to be a "best value" solution, offering employers features AND affordability. The unit(s) is also well-suited as a wall mounted time clock, and in particular, is a practical fit for "multiple location" or multiple clock installations.
